Meet "Loki"

Value Proposition

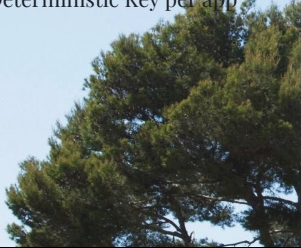

Need an efficient and encrypted way to access passwords?

Loki provides...

- Unauthorized Access
- Data Leakage
- Weak Authentication
- Logging Sensitive Data

Core Features

- Conversational AI assistant for credential management through Anthropic API
- Store credentials in one secure-looking location (AppWrite DataBase)
- Strong password generation
- Interact with their vault in a more natural way
- Event logging for security tracking
- Deterministic Key per app
- Frontend: React, Css
- Backend: Appwrite, Vite, Node.js
- Databases: Appwrite
- Api: Anthropic Api

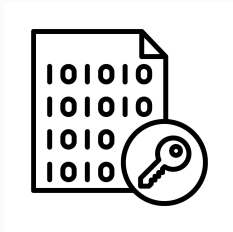

MVP Flow

01	02	03	04
User signs into app	User asks Loki to create a credential for app	Loki generates a strong password	User assigns retrieval phrase
05	06	07	08
Loki stores the Key	Later, the user asks for Key	Loki requires verification phrase	Loki returns password and logs activity

Future Development

- Full End-To-End Encryption

- Personalized Authentication

- Multi-Device Sync
